## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments filed 1/7/2008 have been fully considered but they are not persuasive.

The Applicant the argument that the grounds of rejection has failed to show the first mode being processed after the detection of predetermined potential.

Blatter discloses the restoration process being execution upon detection of potential see Col 4 Ln 4-31. And further the detection of the potential executing the bus connection see Col 4 Ln 60-64.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### ***Claim Rejections - 35 USC § 103***

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 5948085 to Blatter in view of US Patent 4997288 to Rosenow.

Regarding Claim 1, 13, 17, Blatter discloses the information processing system comprising a potential detection section which detects a predetermined potential applied to a serial bus terminal see Abstract & Fig. 2 item 110; a power supply section(Fig. 1 item 5V) which supplies the predetermined potential to each component part as a source potential upon detection of the predetermined potential by the potential

Art Unit: 2132

detection(Fig. 2 item 110) section see Col 2 Ln 2-10; an information detection section(U2) which detects the predetermined information supplied to the serial bus terminal(Fig. 1 STRB\_OUT/DATA\_IN) see Col 5 Ln 30-39; changing of modes from first and second modes see Col 4 Ln 4-31 & Claim 1. But Blatter does not disclose the operation information and encryption/decryption process. However, Rosenow discloses the processing section which executes selected one of the encryption and decryption devices that supplied power supply see Fig. 2C item 254C, 256C in accordance with at least the operating information supplied from the operating key arranged on the body before the detection of the predetermined information see Fig. 26 item 2602 & Fig. 42 item SKEY & Fig. 26 item 2602. It would be obvious to one having ordinary skill in the art at the time of the invention to the encryption/decryption devices in the invention of Blatter in order to protect the client from network risk as taught in Rosenow see Col 2 Ln 20-34.

Regarding Claim 2, 6, Blatter discloses the initially set in operation mode for executing the processing operation in accordance with operating information supplied from the operation key see Col 5 Ln 40-49.

Regarding Claim 3-5, Blatter discloses the potential being used to change into mode and the operation key being used to perform operation see Col 2 Ln 51-63 & Col 4 Ln 19-31.

Art Unit: 2132

Regarding Claim 7, 9-10, Blatter discloses the lapse in time for detection of potential and recording or reproducing operation see Col 4 Ln 45-59 & Col 5 Ln 7-13.

Regarding Claim 8, 14, Blatter does not disclose the encryption/decryption process. However, Rosenow discloses the encryption/decryption process see Fig. 2B.

Regarding Claim 11-12, 15-16, Rosenow discloses the process being carried without regard to the information detection section see Fig. 2B.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
